METRA Electric North Dispatcher.....322-2861
METRA Electric Terminal Dispatcher.....322-2868

Additional Contact Information:

ELECTRIC RAILROAD SAFETY STATEMENT

All employees, visitors, or contractors are warned that this is an Electric Railroad and that it is operated by High Voltage Transmission and Trolley Wires. All employees, visitors or contractors are forbidden from touching or in any manner putting themselves in personal contact with these high voltage wires. If it becomes necessary for any employee or contractor, in the discharge of their duty, to pass in proximity to these high voltage wires, they are warned against the dangers attending personal contact with them. Particular attention is called to the poles and wires used in the electric operations of trains. These may become displaced from the actions of the elements or by reason of failure of some mechanical part, and when out of place are a source of danger.

Employees or contractors working on or about electric cars must exercise due caution in keeping clear of all pantographs and 1,500-volt DC equipment on the cars when pantograph is up. When one pantograph is in contact with the overhead wire, the second pantograph, even when latched down, is energized and electrically alive. Employees must not work on any 1,500-volt DC equipment, wiring open switch box or equipment cover without first lowering all pantographs. Employees must not work on or about storage boxes on diesel engines and passenger cars with open flame lights or torches. This is to avoid explosion of gas generated in such battery boxes.

TIMETABLE CHARACTERS

The following characters provided in the timetable indicate:

A	Arrive
ABS	Automatic Block Signal
B	General Order Board
cs	Controlled Siding
CTC	Centralized Traffic Control
C	Passenger Stop
d	Depart when ready; may leave up to 4 minutes in advance of schedule time.
D	Standard Clock
E	Locomotive Servicing Facility
EMU	Electric Multiple Unit
f	Flag Stop
F	Facsimile Machine/Remote Printer
H	Control Point
I	Interlocking
J	Junction
L	Leave
M	Manual Interlocking
MP	Mile Post
MT	Main Track
N	Ticket Agent
NST	Non Signal Territory
PTC	Positive Train Control
Q	Company Telephone
R	Radio
S	Siding
s	Regular Stop
T	Wye
W	Accessible Station
X	Crossover
X(2)	Multiple Crossovers
Y	Yard
Z	Spring Switch

TIMETABLE INSTRUCTIONS

TIMETABLE RULES

Superseding Rules And Regulations Which Are Inconsistent Therewith

Rules herein apply to and govern all trains and employees of railroads using CSS and NICTD tracks.

CSS and NICTD trains are governed by rules, special instructions and timetables of foreign railroads while operating thereon.

Traffic Signals: Add

Michigan City – 11th Street:

Signals at intersections with Franklin Street, Washington Street and Wabash Street have automatic holding feature, which maintains GREEN indication for 11th Street Traffic when train is between Buffalo Street and east side of Franklin Street. Flashing WHITE indicator lamps located on poles adjacent to intersections are illuminated when holding feature is activated.

Westward trains must stop short of holding feature circuit located just east of Franklin Street, which is indicated by a 24" wide YELLOW stripe on roadway.

When train is ready to depart, it should advance into the circuit only when the traffic light is RED. Flashing WHITE indication lamps will illuminate to indicate the holding feature is activated. Train may proceed only when all traffic lights turn GREEN.

Airport Main Track:

Traffic signals at following intersections with Bendix Drive are connected with individual track circuits at each crossing: Prast Boulevard, Bonds Avenue. Traffic signals at each crossing flash RED for vehicular traffic when train is approaching and continue to flash RED until train clears circuit.

Crossing Gate Cutouts:

MILE POST	Name of Crossing	Push Buttons	Portion of Circuit cut-out
11.91	Walnut Road	Crossing	Main Track West of Crossing
46.07	NIPSCO / Arcelor Mittal Steel	Crossing	Main Track, except over Crossing

To reduce unnecessary operation of train activated crossing warning signals, automatic time cut-out features are installed at selected crossings. Limits of automatic time cut-out is identified by **"END OF CIRCUIT"** sign installed on Engineer's side of the track approaching the crossing. Trains stopped or approaching crossing at unusually low speed must proceed slowly past **"END OF CIRCUIT"** sign and approach the crossing prepared to stop if crossing warning is not operating properly or if the crossing is occupied by vehicles.

Location Automatic Time-Out Features:

MILE POST	Location	Direction	Seconds

MAIN TRACK -

WEIGHT & CLEARANCE RESTRICTIONS

- Freight cars not exceeding 286,000 lbs. gross weight may be moved between CP 75.3 and M.P. 32.00. Cars must have a minimum length of 40 feet.
- Freight cars not exceeding 263,000 lbs. gross weight may be moved between MP 32.00 and MP 0.00. Cars must have a minimum length of 40 feet.
- Loaded freight cars with gross weights heavier than those listed above or with lengths shorter than those listed above can only be moved with authority from Engineering Department.
- Freight cars with loads up to 12'0" wide with a height not exceeding 8'9" above top of rail may be moved from M.P. 5.00 to CP 75.3.
- Freight cars with overhanging loads exceeding 6'0" can only be moved with authority from Engineering Department.
- Plate "F" cars with height up to 17'2" may be moved from M.P. 31.70 to CP 75.3.
- Freight cars with loads wider than those listed above and not exceeding 12'-6" can only be moved with authority from Engineering Department.

TIMETABLE INSTRUCTIONS

TEMPERATURE SPEED RESTRICTIONS:

When train crews are advised by the Train Dispatcher that Temperature Speed Restrictions are in effect, the speed of all passenger trains is restricted to fifty-five (55) miles per hour or the posted track speed, whichever is lower, reducing speed at control points as specified, watching for loose catenary on siding or crossover. The speed of all freight moves is restricted to fifteen (15) miles per hour.

SPRING SWITCH LOCATIONS:

South Bend Divide – MP 0.10

Grandview – MP 3.17

West End South Bailly Siding – MP 46.06

NICTD TRAINS MOVING OVER CN AT KENSINGTON

Trains approaching Kensington Interlocking are to be guided by the following protocol when CN has **specified that Rule 1102 (Planned Work) or Rule 1107 (Work Project Protection) is in effect between CN/Metra mileposts 14 and 15.**

Planned Work Limits (Rule 1102). No movement may be made into or within the limits without the permission of the employee in charge. All movements must be made at restricted speed unless given another speed by the EIC.

Before arriving at the limits, a crew member must attempt to contact the EIC by radio to avoid delay, and to report the train's location and track being used. A train within the limits at the time Planned Work takes effect must not make further movement unless instructed by the EIC.

All instructions from the EIC must be repeated and confirmed with that is correct. Only the CN RTC (Dispatcher) or the Metra Electric South Dispatcher may relay these instructions to a train.

When Planned Work Limits (Rule 1102) are within Kensington Interlocking, the CN Employee-In-Charge must coordinate train movements with the Metra Electric South Dispatcher before giving instructions to trains. If track route is different than instructions received, stop train and immediately contact the Employee-In-Charge.

Work Project Protection (Rule 1107) will specify the location of an employee providing protection for a work project in close proximity to railroad property. Unless otherwise provided, the employee in charge must be contacted before passing the location indicated. All instructions from the employees must be repeated and confirmed with that is correct. Only the CN RTC (Dispatcher) or the Metra Electric South Dispatcher may relay these instructions to a train.

Trains operating via NICTD-2 route must make radio contact with the CN Employee-In-Charge (or CN Dispatcher) to obtain authority from the CN Employee-In-Charge before entering either the Rule 1102 work limits or, unless otherwise specified, the Rule 1107 work limits.

Trains operating via NICTD-1 route, the Ladder Track, will be governed by instructions received from the Metra Electric South Dispatcher through the use of signal indications and verbal authority. When operating on NICTD-1 (ladder track) route, it is not necessary to contact the CN Employee-In-Charge for authority to cross CN tracks.

When trains are advised to contact the CN Employee-In-Charge (or CN Dispatcher), Home 6 on the cab radio is programmed with the CN radio channel.

Movement in both directions along the NICTD-2 route is authorized.

To access the NICTD-2 route for eastbound movement, trains will diverge at 65th St. Interlocking Plant to either Metra main tracks 3 or 4.

Current maximum authorized speed along the NICTD-2 route remains at 25 mph.

Eastbound movement through Kensington Interlocking via the NICTD-2 route is governed by signal indication at the following locations.

NICTD TRAINS MOVING OVER CN AT KENSINGTON

- **STR. 14.21 (Overhead Signal)**

- Rule 9.1.1, STOP
- Rule 9.1.2, RESTRICTING
- Rule 9.1.9, DIVERGING APPROACH
- Rule 9.1.10, DIVERGING CLEAR
- Note: A CLEAR or APPROACH INDICATION MUST BE TREATED AS A STOP, AS IT WILL PROVIDE AN UNWANTED ROUTE ON METRA

- **STR. 14.37 (Overhead Signal)**

- Rule 9.1.1, STOP
- Rule 9.1.2, RESTRICTING
- Rule 9.1.9, DIVERGING APPROACH
- Rule 9.1.10, DIVERGING CLEAR
- Note: A CLEAR or APPROACH INDICATION MUST BE TREATED AS A STOP, AS IT WILL PROVIDE AN UNWANTED ROUTE ON CN

- **CP75.3, Entrance signal to NICTD (masted signal on left side of main track 2)**

- Rule 9.1.1, STOP
- Rule 9.1.2, RESTRICTING
- Rule 9.1.4, APPROACH
- Rule 9.1.5, CLEAR
- Rule 9.1.6, ADVANCE APPROACH
- Rule 9.1.7, APPROACH DIVERGING

Recently there has been some confusion on the proper identification of the absolute signal at Kensington, NICTD Timetable CP 75.3, Track 2. NICTD will continue to identify this signal as CP 75.3 when in radio communication with the NICTD Dispatcher and its employees.

Metra Electric identifies NICTD CP 75.3 as structure 14.71. When Metra Electric South Dispatcher is giving permission to pass a Stop Indication at this location, it will be identified as Structure 14.71. This Absolute Signal is controlled by the Metra Electric District.

TIMETABLE INSTRUCTIONS

HAND OPERATION OF DUAL CONTROL SWITCH

The remotely controlled, power-operated switch machines at interlockings and control points have dual control features including a hand-throw lever and a selector to permit power or hand operation. Authority must be obtained from the Train Dispatcher before operating these machines by hand. When instructed to operate the dual control machines by hand, operate the switch as follows:

1. Unlock the switch lock.
2. Place the selector lever in the HAND position.
3. Operate the hand throw lever until the switch points are seen to move when the lever is operated, even if the switch is lined for the intended route.
4. Line the switch for the intended route.
5. After the entire train has passed over the switch points, the employee must return the switch to power unless otherwise instructed by the dispatcher to leave the switch lined and locked in the hand throw position. All following movements are governed by rule 8.1.
6. Unless otherwise instructed by the dispatcher, return the switch to power by restoring the selector lever to the POWER position and lock.

On-track equipment will not move through an interlocking until the route has been lined, locked and cleared by the Train Dispatcher. If the Train Dispatcher cannot line it, the selector lever must be placed in the "Hand Throw" position for each switch in the route. First check the switch for any obstructions, do not clear any obstructions unless the switch is in **HAND THROW**.

HOT BOX DETECTOR (HBD)/DRAGGING EQUIPMENT DETECTOR (DED)

These Trackside Warning Devices (TWD) are located approximate to MP 54.1:

- Communications are from detector to Operating Crew
- All trains passing the detectors will be tested
- The Train Dispatcher is to be immediately notified if the detector does not appear to be functioning

A radio detector message will be transmitted over Channel 1 during train passage.

This message will indicate "no defects" or will state any alarms or "integrity failures" that were detected during the train passage

Detector alarm messages may identify more than one defect. Inspect train for "ALL" reported defects before proceeding.

If axle designation is not indicated in the radio message, inspect both sides of entire train.

Should a failure occur while the train is passing the detector an announcement will be made indicating there was a failure.

- In all instances where train inspections occur, the Train Dispatcher must be contacted

CHECK B4 U CHANGE

- ☒ Change Control Board Approved*
- ☒ Coordination in Place
- * If unsure, check with your manager

CHANGES TO A GRADE CROSSING

- Street widened
- Asphalt added
- New panels
- Changes to gates - including Pedestrian gates

CHANGES TO TRACK/GEOMETRY

- Alignment
- Superelevation
- Removal or moving**

CHANGES TO SIGNS

- Any change to a milepost sign
- Any damage to a milepost sign or PTC assets along the rail as referenced on the PTC Asset List

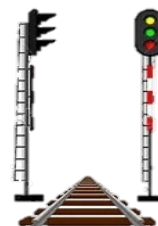

CHANGES TO SPEEDS

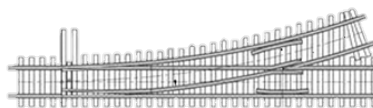

- Passenger or Freight
- Tons per Operative Brake
- Subdivision Special Speed Restrictions

CHANGES TO SIGNALS

- Type of Signal
- Operation of Signal
- Signal Aspects
- Signal Location Program
- Location of Signal
- Number Plate

CHANGES TO A TURNOUT/DIAMOND

- Adding/changing/removing a turnout/derail
- Relocating insulated joints at clearance pts.
- Replacing switch points/derail
- Any changes to the geometry
- Changes to the type of switch:
 - Powered
 - Electrically Locked
 - Hand Operated
 - With leaving signal
 - Non-clearing
- Type of Derail

ANY & ALL CHANGES TO THE PHYSICAL CHARACTERISTICS

**** Emergency Repair: Proceed with repair and contact Dispatcher as soon as complete.
Note PTC component change or modified.**

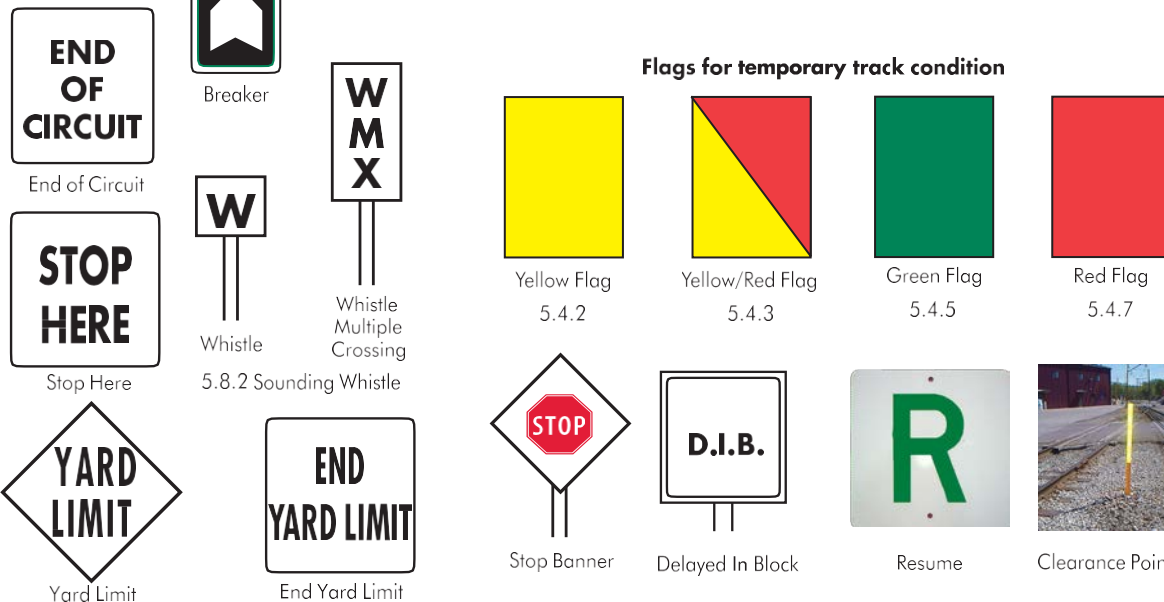

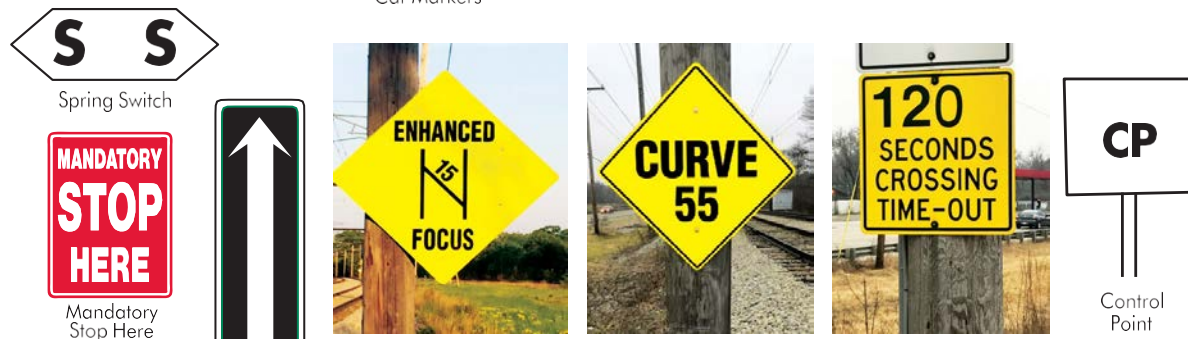

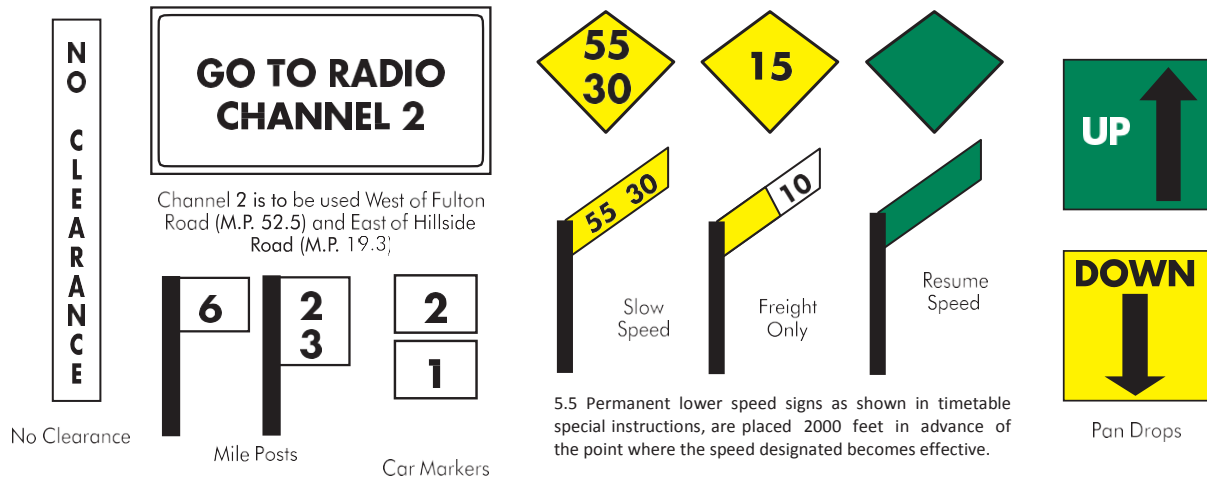

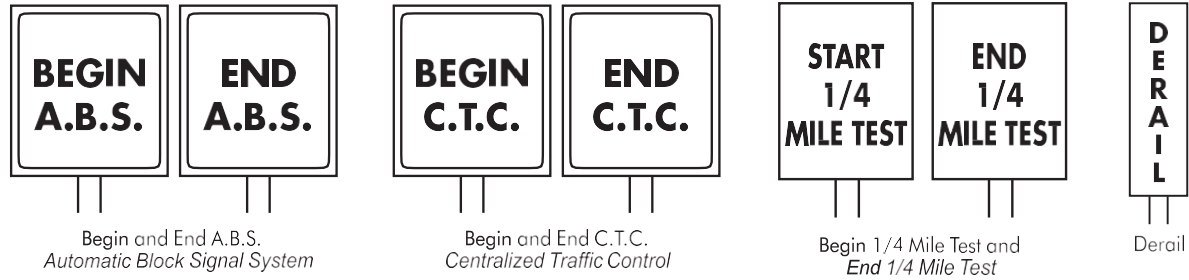

SAFETY ALWAYS

NOTES

GCOR SYSTEM SPECIAL INSTRUCTIONS

Except where shown, the following roadway signs have white backgrounds with black letters and/or numbers.

GCOR AUTOMATIC BLOCK, AND INTERLOCKING SIGNAL INDICATIONS

Rule	Aspect	Name	Indication
9.1.5		Clear	Proceed
9.1.6		Advance Approach	Proceed prepared to pass next signal, NOT exceeding 40 MPH and prepared to stop at the second signal.
9.1.7		Approach Diverging	Proceed prepared to advance on diverging route at next signal at prescribed speed through turnout.
9.1.4		Approach	Proceed prepared to stop at next signal. Train exceeding 40 MPH must at once reduce to that speed.
9.1.10		Diverging Clear	Proceed on diverging route at prescribed speed through turnout.
9.1.9		Diverging Approach	Proceed on diverging route at prescribed speed through turnout, prepared to stop at next signal. Trains exceeding 40 MPH speed must at once reduce to that speed.
9.1.2		Restricting	Proceed at restricted speed.
9.1.1		Stop	Stop
9.1.11		Diverging Clear Approach Diverging	Proceed on diverging route at prescribed speed through turnout prepared to proceed on diverging route at next signal at prescribed speed through turnout.
9.1.3		Open hand operated switch	Stop, then open hand operated switch. When signal governing movement of train or engine from a track where switches are hand operated displays "Stop" indication in automatic block signal territory, the letter "S" illuminated, authorizes only the opening of the hand operated switch. After the switch has been opened, movement of train or engine out of the track will be governed by indication of the signal (See Rule 9.1.1 or 9.1.4).
